

Why switch to Aluminium?

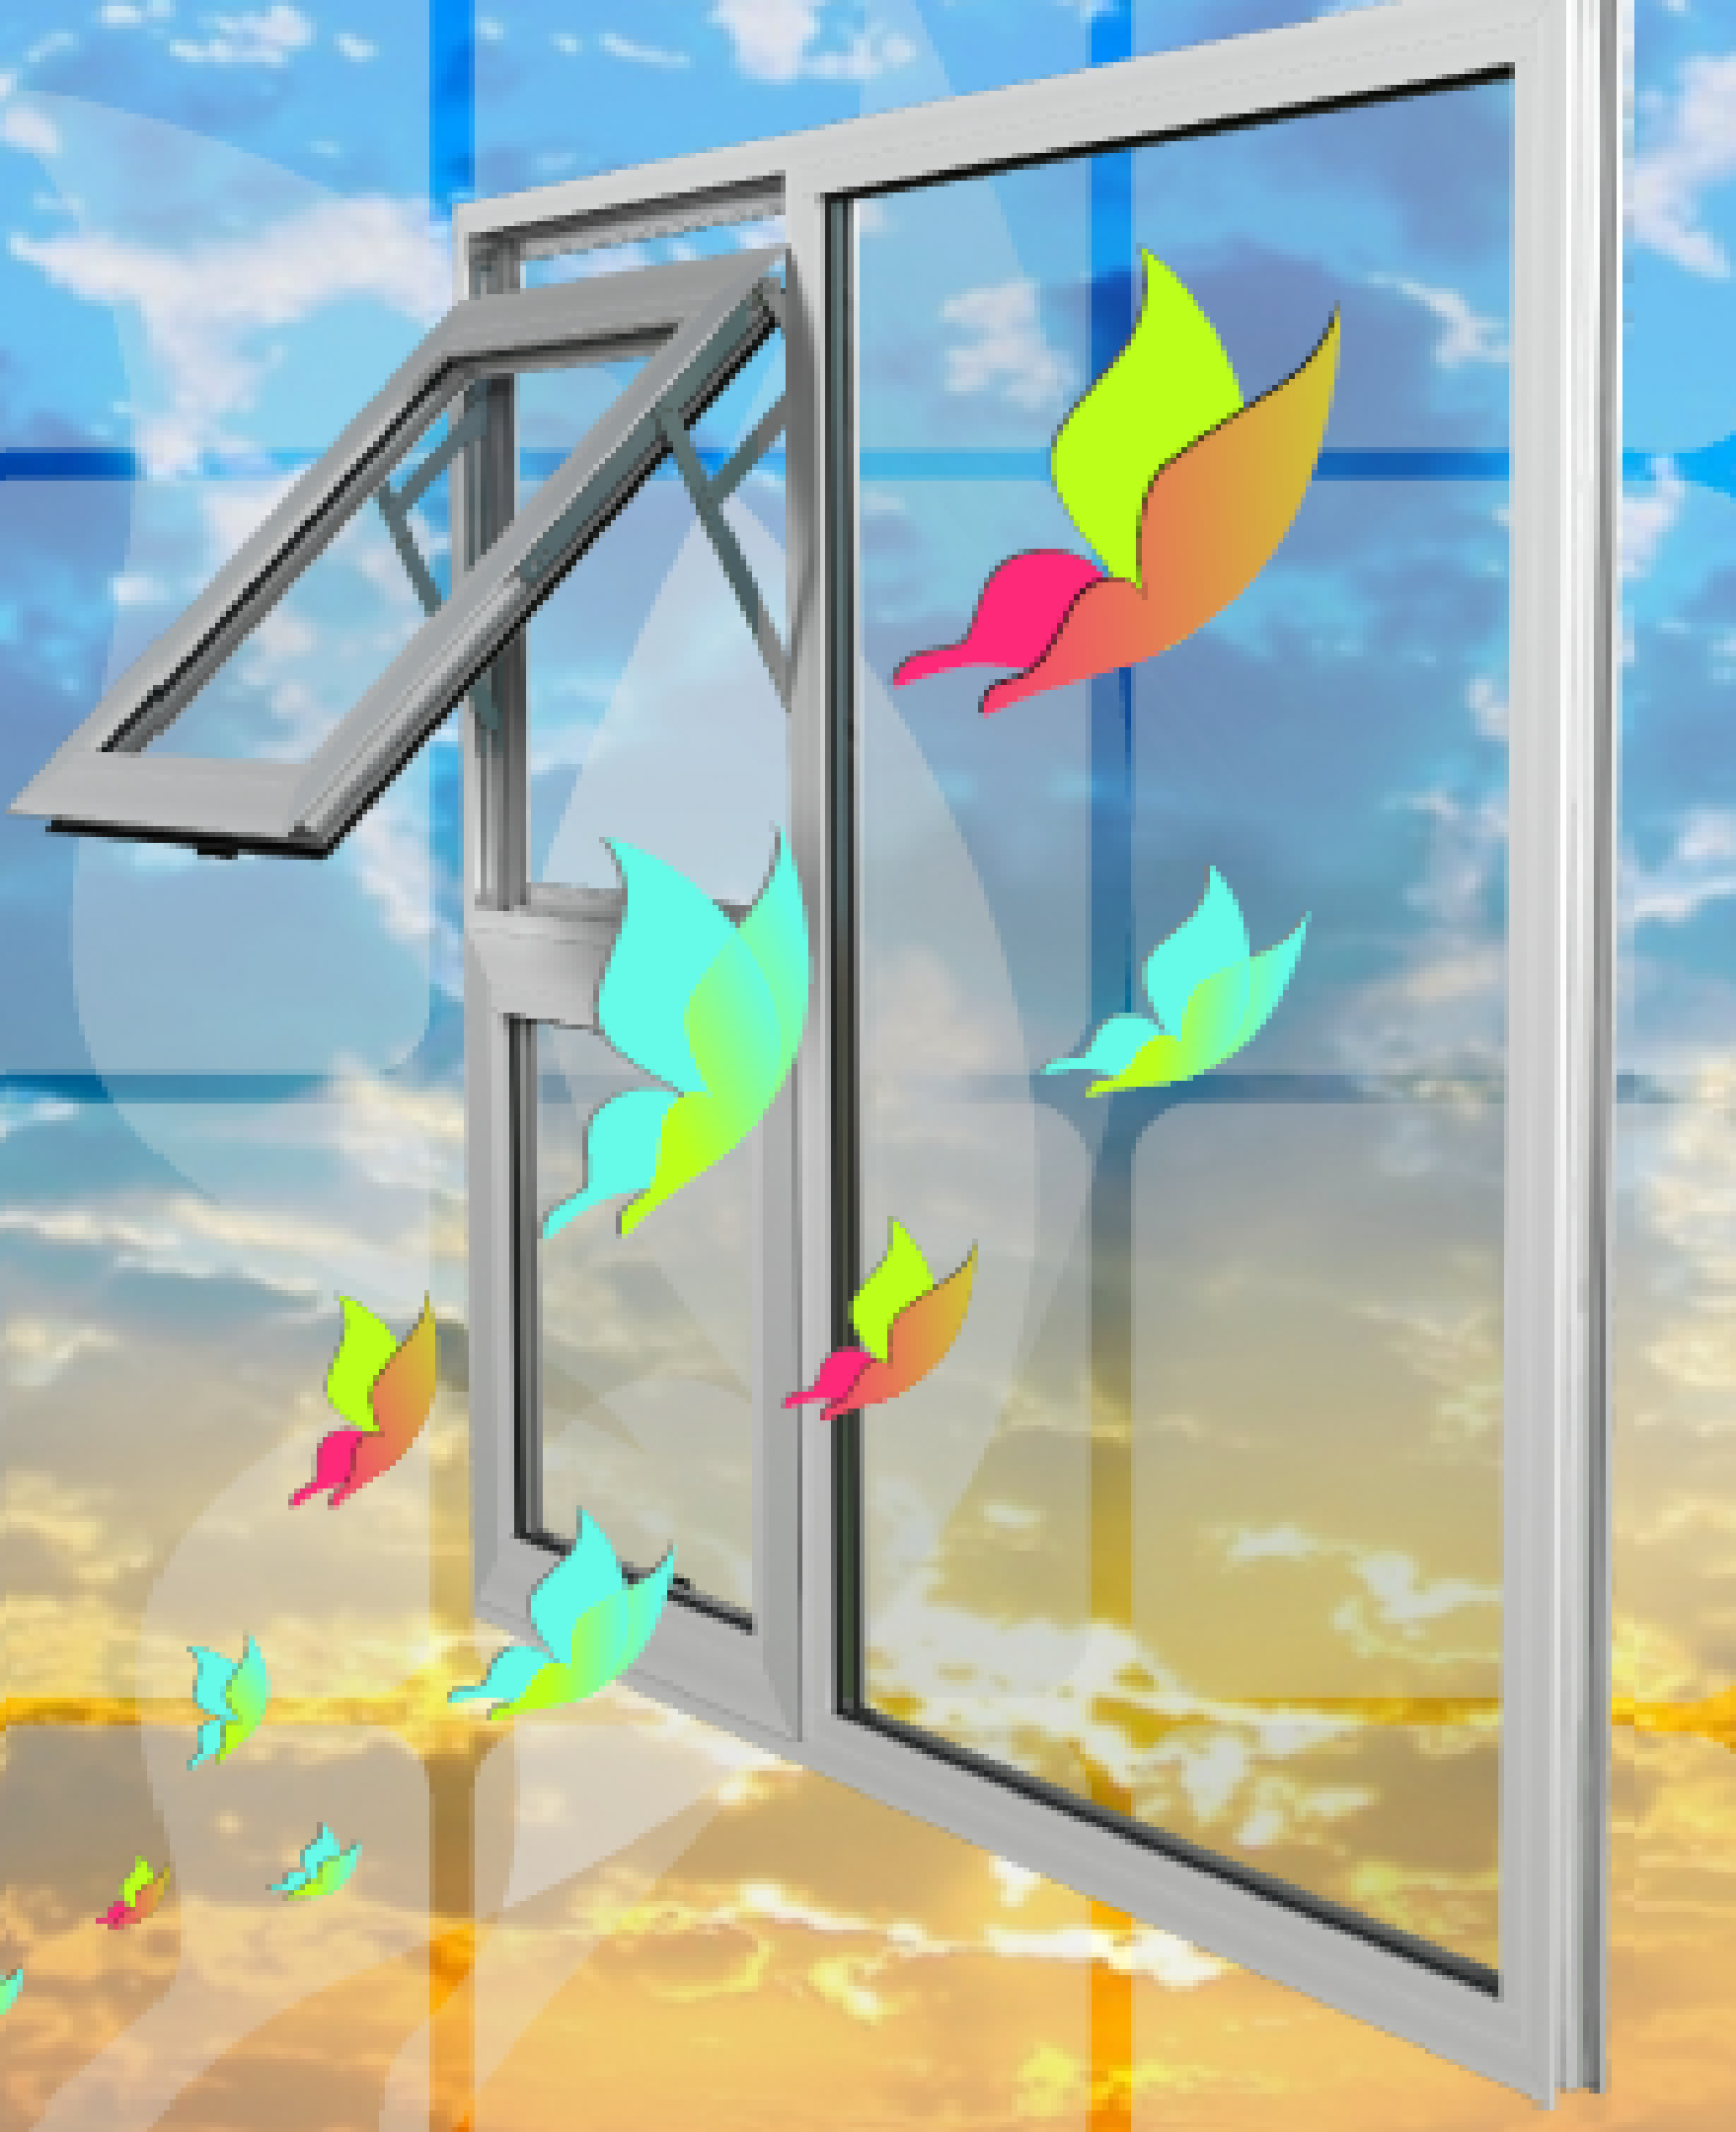

Maintenance - Aluminium is easily maintainable and only requires regular cleaning to keep it looking as good as new. This material is not sensitive to UV rays and does not rot, rust or bend.

Powder coat finish - Customers have the option of choosing a sleek powder coat finish that provides an aesthetically pleasing finish and extreme longevity. Not to mention, it is a product that is less harmful to the environment.

Recyclable - Aluminium is an environmentally sustainable material that can be recycled with only 5% of the initial energy needed to create it. Thus, reducing the overall carbon footprint of aluminium windows & doors.

Design flexibility - Aluminium options are limitless and can be customized according to your preference. It provides an endless amount of customization options with finishes and glasses.

Affordability - Aluminium provides a strong as well as an economical solution for any domestic and commercial appearance when compared to other framing options, thus making it the most cost-effective and ideal option for windows & doors.
